Dr. John H. Hokokian, D.C.

Dr. John H. Hokokian is the sole proprietor of Hokokian Chiropractic.

Dr. Hokokian has been practicing chiropractic since 1989. His years in practice have allowed him to treat many patients with various types of conditions.

His patients are very diverse — ranging from young children to mature adults. His practice emphasizes families and all of their needs. He believes that families are first and he likes to provide health care for the entire family.

Dr. Hokokian was born in Fresno. He is a graduate of California State University, Fresno and from Palmer College of Chiropractic-West. After Graduating from the chiropractic college, he returned to Fresno, to associate with a group practice before opening his own office.

He strives for excellence through superior patient care, education, ergonomic instruction, home care, and exercise.

Beginning Care

You will meet the doctor after completing some brief forms describing you, your health history and your desired goals. We offer this initial consultation so Dr. Hokokian and our staff may begin to know one another.

If you are a good candidate for chiropractic care and Dr. Hokokian believes he can improve your condition, an examination will follow. This will allow him to better locate the cause of your problem(s). His examination is thorough and will put you at ease.

If x-rays or special studies (MRI, CT, NCV's, Labs, etc.) are required, Dr. Hokokian may choose to take them in our office or he may refer you to another facility.

Your examination, x-rays, and/or other special studies will be obtained before he reports your findings.

You will be shown the results and conclusions Dr. Hokokian has reached. If he believes you will benefit from consulting another health care practitioner, he will gladly make the proper referral.

Dr. Hokokian will recommend a treatment program for your specific condition(s). This will include a plan to fulfill your health goals and a plan for future visits. The purpose of these frequent visits will be to locate and reduce your vertebral subluxations and monitor the healing process.

You can join the millions who have chosen care delivered without medications and surgery.
